

Definition Connection

-Match the word to its definition

Electrophoresis	A long length of DNA which contains multiple genes. These may be linear or circular. Humans have 46 including XX or XY.
Chromosome	Harmful strains of bacteria can be altered to be non harmful
Restriction	Organisms without a true nucleus, membrane bound organelles
Spidergoat	The discipline of biology which looks to transform novel gene systems into different organisms
Nucleus	Process of DNA fragment/protein separation through size and/or charge
Prokaryote	An antibiotic
Synthetic Biology	A unit system of synthetic biology from which novel systems can be created through the combination of different units.
Attenuation	A name given to goats that are able to make spider web silk which can be produced for different purposes
BioBrick	DNA is contained within this organelle in eukaryotic cells
Chlorophenicol	The cutting of DNA at specific sites
